linkedin.com/in/arta-ananta github.com/Kyouji-Prinz

PROFESSIONAL SUMMARY

Third-year Applied Data Science student with a strong foundation in machine learning and data analytics. Experienced in building automated data pipelines, developing analytical models, and extracting actionable insights from complex datasets. Familiar with Python, SQL, and data analytics tools. Brings a unique, detail-oriented perspective to data visualization, honed through previous professional multimedia experience. Eager to leverage analytical skills to solve real-world business problems.

EDUCATION

Multimedia 07/2021 – 07/2024
SMKN 1 Jombang, Indonesia

Bachelor of Applied Science (D4) in Applied Data Science 08/2024 – Present
Politeknik Elektronika Negeri Surabaya (PENS) Surabaya, Indonesia

- **GPA:** 3.27 / 4.00
- **Relevant Coursework:** Data Processing Workflow, Machine Learning, Database Management

AREAS OF EXPERTISE

Programming & Databases
Python (Pandas, NumPy), SQL (PostgreSQL, MySQL)

Machine Learning & Analytics
PyCaret, Predictive Modeling, Data Visualization

PROFESSIONAL EXPERIENCE

Multimedia Intern 03/2023 – 06/2023
ASA Desain (Architecture & Interior Design Studio) Jombang, Indonesia

- Enhanced architectural design mockups through advanced photo editing techniques, transforming raw 3D models into realistic and visually appealing assets for client presentations.
- Produced and edited engaging promotional video content for the studio's social media platforms (Instagram and YouTube), effectively increasing online brand visibility.
- Collaborated closely with lead architects to ensure visual outputs accurately represented design concepts and met tight project deadlines.

SmartSales

- Developed a comprehensive sales and inventory analytics solution using Python and Pandas to track business performance.
- Analyzed historical sales data to identify trends and created visual reports, empowering stakeholders to make data-driven decisions on stock management.

Regokemon

- Built an interactive tool focused on advanced text processing and data extraction using Regular Expressions (Regex).
- Demonstrated strong capabilities in data cleaning, string manipulation, and preparing unstructured text data for further analytical processing.

Laptop Recommendation System

- Designed a recommendation engine using Python and Scikit-learn to suggest laptops based on user preferences, budget, and technical specifications.
- Implemented data preprocessing and similarity algorithms on a comprehensive dataset to deliver highly accurate and personalized product matches.

LLM Chatbot AI

- Built an interactive AI chatbot leveraging Large Language Models (LLMs) to provide automated, context-aware responses to user queries.
- Integrated the model using **Python** and API frameworks, optimizing the prompt engineering process to ensure accurate and relevant conversation flows.
